

Comprehensive Whole Body-MRI Scan

(Coronal T1 and T2 MRI of the entire body + Whole Body DWI + T2 Sagittal Whole Spine)

RM2,888 (Including Radiologist's Fee)

Whole-body MRI is a new technology that allows for MRI of the entire body in a single imaging session. According to a BMJ article (Taylor S, et al. 2019), the accuracy of whole-body MRI is sufficient to replace other tests for cancer diagnosis, staging, and treatment planning. In terms of identifying metastatic disease, the whole-body MRI pathway produced similar results to current pathways and resulted in the same treatment decisions. Many cancers and other diseases do not cause symptoms until the advanced stages, so early detection can lead to faster monitoring and treatment that can save lives.

Save Time, Less Tests, Speed up the Staging Process, and Save Money!

Who should get this:

For early detection of cancers and other diseases.

Who should order:

Health Screening Clinicians, Physicians, Oncologists, Surgeons, Orthopaedic Surgeons, Neurosurgeons, Urologists, Gynae-Oncologists

Patients consideration:

Able to lay still for one hour, no cochlea implants, pacemakers (MRI compatibility), body implants (prosthesis, valves, screws, etc), surgical clips (Aneurysm Clips, intraabdominal clips), or brachytherapy history.

Report:

A formal report will be included along with high-definition printed images filed for the patients' own records.
