

FELLOWSHIP PROGRAMMES AT UCSI HOSPITAL

UCSI Hospital is a leading healthcare institution in Malaysia that offers high-quality medical care across primary, secondary, and tertiary services. The hospital, renowned for its state-of-the-art facilities and patient-centered approach, is committed to achieving excellence in medical treatment, innovation, and education. As a teaching hospital, UCSI Hospital fosters the development of future healthcare professionals through fellowship programs in specialised fields like cardiology, cardiac surgery, orthopaedics, and breast and endocrine surgery, solidifying its role as a hub for medical excellence and professional growth.

Fellows at UCSI Hospital benefit from one-on-one mentorship by seasoned experts from the UCSI Research Committee, guiding them through every stage of research, from study design to publication. This personalized training equips fellows with rigorous research skills, with each fellow aiming to publish a well-executed research paper. Additionally, some fellowships conducted collaboratively with other universities and hospitals enhance the experience with interdisciplinary learning, broader clinical exposure, networking opportunities, and joint research projects, further enriching the fellows' professional and academic development.

Available Fellowship Programmes
